Appendix 3.2.2a Plant families recorded as present and important in the diet of 33 species of farmland bird (plant material has not been recorded in the diet of six species, see Appendix 3.2.1). Only those families that contain one or more of the non-target plant species listed in Section One are considered. A food taxon is considered important in the diet if it comprises a mean of more than 5% of the diet over all quantitative studies reviewed (see text in see Section 3.2.2). Shaded bird species are included in the UK Biodiversity Action Plans and listed in the UK Biodiversity Group Reports (Anon 1995 & 1998). The species codes are as given in Appendix 3.2.1.
